Gemini App/AI Studio Mini-Guidelines

For tasks that use Gemini App and Google's AI Studio

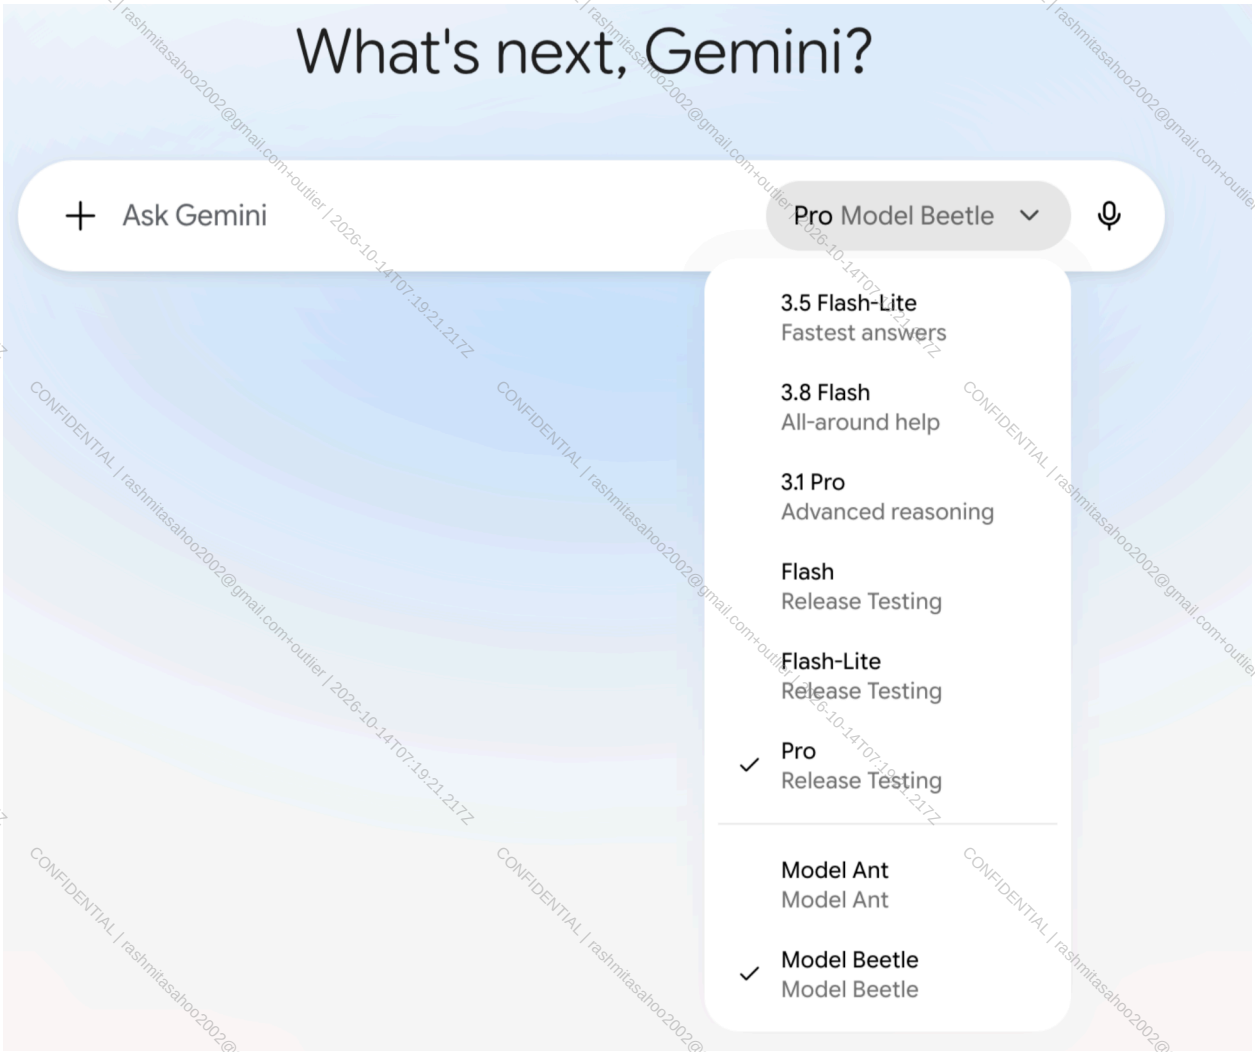

Module 1: Gemini App

Step 1 — Open the model picker

Open the Gemini App and go to the model selection menu.

Step 2 — Select the model

Navigate to **Pro Release Testing** → **Model Beetle**.

Quick check

Before starting any test, confirm that **Model Beetle** is shown as the active model.

Module 2: AI Studio

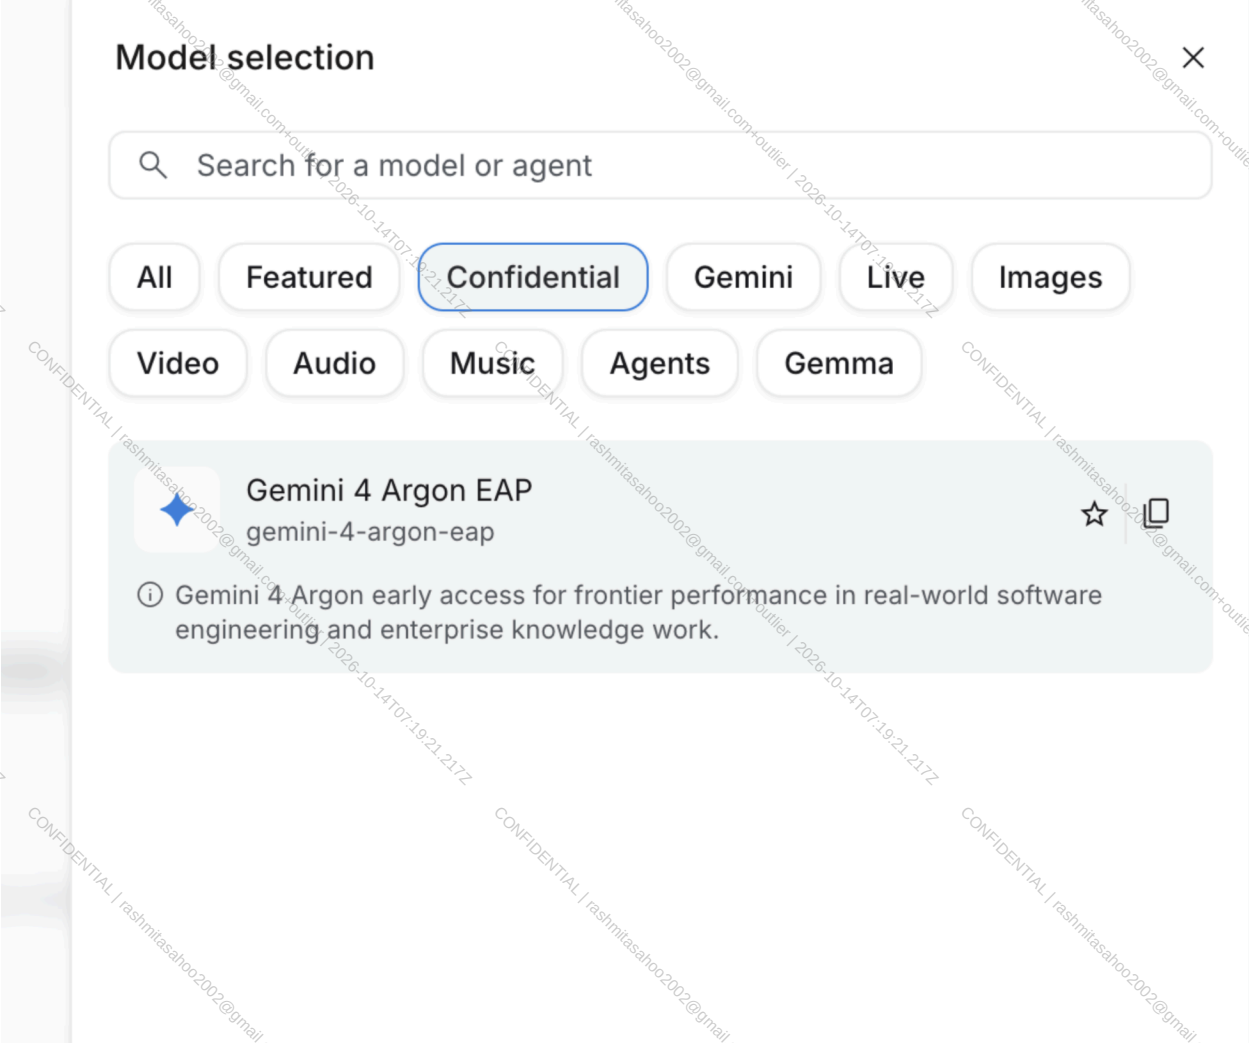

Go to AI studio: https://aistudio.google.com/prompts/new_chat

Step 1 — Open model selection

In AI Studio, look at the **top right** of the screen and open the **Model selection** panel.

Step 2 — Find the confidential models

Click **Confidential**, then select **Gemini 4 Argon EAP**.

CONFIDENTIAL | rashmitasahoo2002@gmail.com+outlier | 2026-10-14T07:19:21.217Z

Step 3 — Apply the run settings

Set each option in the settings panel exactly as shown below.

Setting	Value	What it means
Model	**Gemini 4 Argon EAP**	The early-access model we are testing
Thinking Level	**High**	The model reasons more deeply before answering
Structured outputs	**Off**	Responses come back as normal text, not forced into a format like JSON
Code Execution	**Off**	The model cannot run code during its response
Function Calling	**Off**	The model cannot call external tools or functions
Grounding with Google Search	**ON** ✅	The model can search Google to support its answers with current information
URL Context	**Off**	The model will not read content from links you paste in
Media resolution	**Default**	Leave unchanged
Output length	**32768 tokens**	Maximum length of a response

Common mistakes

- **Using the wrong model.** Default models are often pre-selected; always check the model name before you begin.
- **Forgetting Grounding.** It is the only toggle that should be on, and it is easy to miss.
- **Settings resetting.** AI Studio settings can revert when you start a new chat or session. Re-check the panel each time.
- **Not finding the model.** If you can't see **Confidential** or **Gemini 4 Argon EAP**, your account may not have access yet. Reach out to the team lead.

Saving Trajectories in AI Studio

Saving and sharing your chat

1. When you're done, **save the chat**.
2. Open Google Drive and **check that the file is there**.
3. Right-click the file and choose **Share**.
4. Under General access, change it to **Anyone with the link**. This removes access restrictions so reviewers can open it without requesting permission.
5. Copy the link and share it.
6. **Make sure Temporary chat is disabled.**
